### About Team Plasma-Tec

Located in Metro Grand Rapids, Michigan, Plasma-Tec manufactures and coats precision machined and ground components for various OEM industries, with a niche in high wear applications such as pump components. We are experts in precision machining, turning and grinding as well as wear-resistant, Thermal Barrier anti-corrosive hard coatings.

Plasma-Tec can machine, turn and grind, as well as spray: ceramics, carbides, and virtually hundreds of different metals and their alloys. We have expertise in machining a wide variety of base materials such as low carbon steels, superalloy and nickel-alloy steels, stainless steels, brass, bronze, and other specialty metals. Our coating processes include Spray & Fuse, Rokide, Plasma and Twin Wire Arc, as well hard chrome plating.

Our facilities encompass over 56,000 square feet and are equipped with modern spray & plating equipment, as well as CNC lathes, CNC mills and CNC grinding machines. We have three fully equipped, environmentally-controlled Quality Labs -- two of which are ISO 17025 certified and API Q1 compliant.

We employ people on multiple shifts. Plasma-Tec has been a leading provider of precision machined & ground coated and non-coated OEM components for over 20 years!

*"We are a large pump repair facility. Our customers demand 'ASAP' turnarounds. Our previous supplier was having difficulty in meeting our needs. Team Plasma-Tec has come on board with **100% on time delivery** and **0% rejects**. Where we used to have to wait for our coated components – now, they are not a concern."*

*Purchasing Manager,  
Pump Repair Company*

*"Our turnaround requirements are **2 – 5 days on most orders**. Team Plasma-Tec, through its ASAP Service, has been **100% on time with flawless quality** since we began working with them."*

*Operations Manager,  
Pump Repair Company*
